SOIL TESTING & LIME SPREADING SPECIALISTS

SERVICE

Your local Pearce Seeds Agronomist has built up a wealth of knowledge of local soil types through experience in the field. They understand the importance of maintaining pH and nutrient levels. In addition to

this their excellent coverage ensures a prompt and efficient testing service, consisting of acre-by-acre sampling, so that any variations in soil pH across the field can be identified. Therefore any consequent applications are accurate and cost effective.

We offer a range of tests including pH, P, K, Mg, trace elements, organic matter plus others.

We recognise the importance of accurate lime spreading and use highly experienced spreader operators across the South West.

Correct soil pH is vital for good crop growth and is affected by:

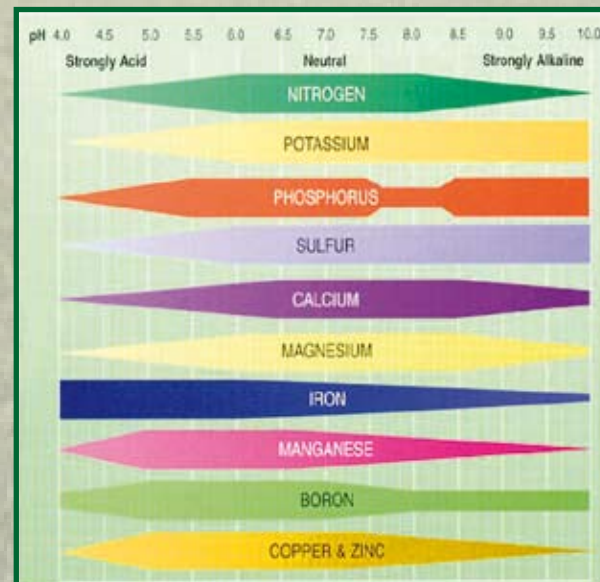

- **Fertilizers**
- **Crop off take**
- **Leaching**
- **Manures**
- **Chemicals**
- **Livestock**

BENEFITS

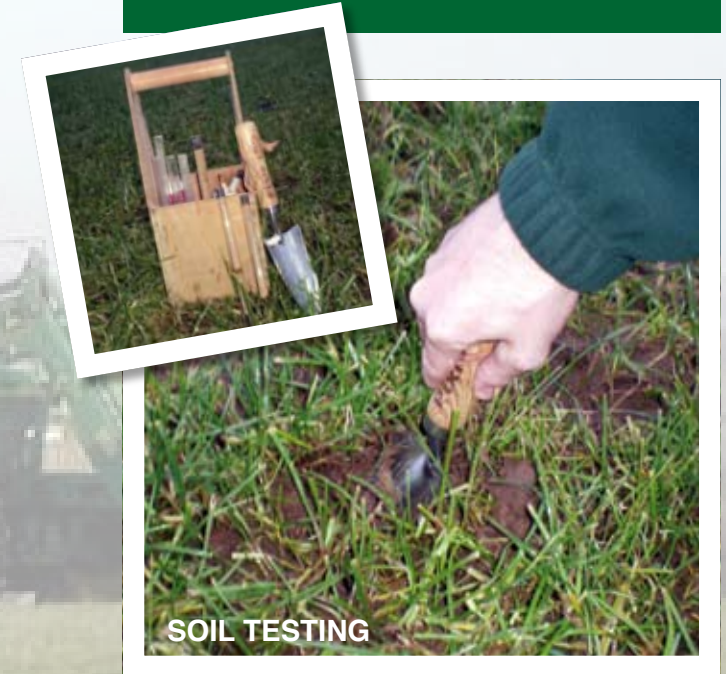

Lime is a truly cost effective input that offers many benefits:

- **Improves efficiency of fertilizers**
- **Enhances plant development**
- **Improves bacterial activity**
- **Aids soil structure**
- **Increases activity of herbicides and weed control**
- **Improves stock wellbeing**
- **Improves forage palatability**

Soil pH greatly affects the availability of nutrients; this is highlighted in the table below.

EXPERTISE

SOIL TESTING

Experts in their field

Pearce Seeds have been supplying lime for 15 years and have built their reputation through:

- **Reliable and prompt service**
- **Accurate soil testing**
- **Knowledge of local soil types**
- **Local hauliers who know the area**
- **Competitive prices**
- **Competent spreader operators**
- **Quality products**
