

PEARCE SEEDS TRIALS

Oil Seed Rape Trials 2017

Conventional Varieties

Campus (KWS)

High yielding, high oil, stiff stems, very vigorous establishment and good all round disease resistance including tolerance to verticillium wilt. A variety which has always been one of the highest yielding varieties in Pearce Seeds trials. A consistent and reliable variety.

Barbados (KWS)

A high yielding variety with strong disease resistance scoring a 7 for both stem canker and Light Leaf Spot. Barbados is slightly later to mature.

Hybrid Varieties

DK Exalte (Monsanto)

DK Exalte has very strong disease resistance scoring an 8 for stem Canker and 7 for Light leaf spot. It is a shorter variety at 154 cm tall combined with Pod shatter resistance. DK Exalte has rapid autumn development so suits the mid or later drilling situation.

Architect (Limagrain)

First restored Hybrid with resistance to Turnip Yellow Virus (TuYV). This new variety has very high yield potential combined with pod shatter resistance and disease resistance scores of 6 for both Light Leaf Spot and stem canker. This is a taller variety but has good stem stiffness and resistance to lodging.

Clearfield Varieties

DK Imperial CL (Monsanto)

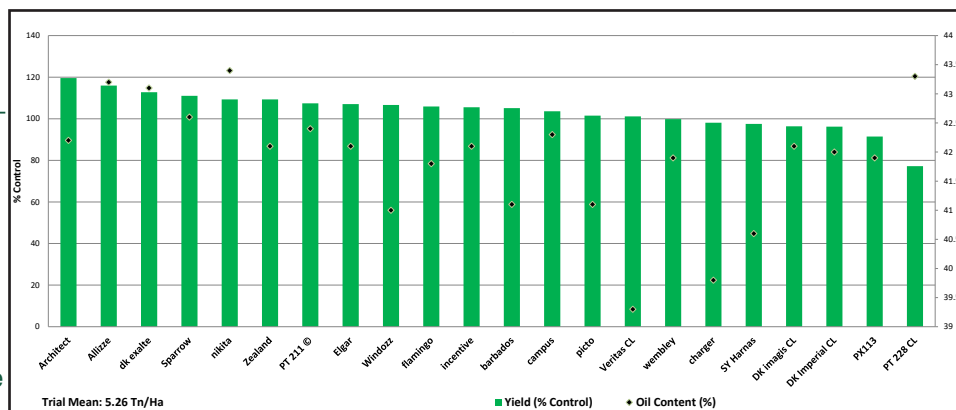

A high yielding Clearfield variety, DK Imperial CL combines vigorous autumn growth with pod shatter resistance and strong disease scores of 8 for stem canker and 6 for Light Leaf Spot. This variety will perform if drilling is delayed or conditions are less than ideal.

Clubroot Resistant Varieties

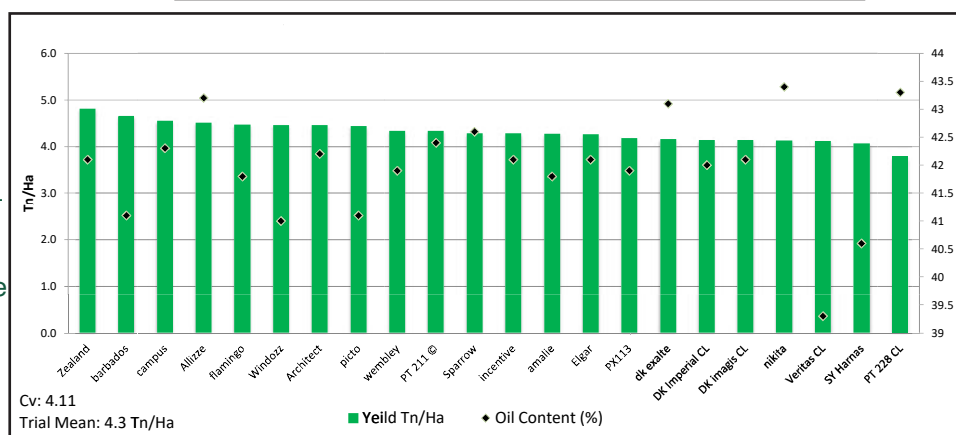

DK Platinum (Monsanto)

Clubroot resistance combined with Pod Shatter resistance and good autumn establishment. This variety has a medium autumn growth habit which makes it suitable for early drilling to early September. Disease resistance scores of 5 for both Light Leaf Spot and Stem Canker.

WINTER OILSEED RAPE YIELD 2017

WINTER OILSEED RAPE YIELD 2017 - CHALK SOIL

Arrow (Limagrain)

A new hybrid variety with very high agronomic merit scoring a 7 for resistance to Light Leaf Spot and 8 for stem canker combined with pod shatter resistance. A candidate variety for 2017 but looks to be a very strong variety.

Veritas CL (DSV)

This variety has strong disease resistance scores of 7 for Light Leaf Spot and 8 for stem canker, this is a robust variety with a very good tolerance of drought.

Pheonix CL (DSV)

A new variety from DSV, this variety has a very high oil content (46.5%) combined with very strong autumn vigour and disease resistance scores of 6 for Light Leaf Spot and 7 for stem canker.
